

# Clockwise and Anticlockwise Colouring

## Amazing Fact

The Earth rotates anticlockwise if you look at it from 'above' and clockwise if you look at it from 'below'.

## Challenge

Some of these spirals are going clockwise and some are going anticlockwise. Can you work out which is which? Colour all of the clockwise spirals one colour and all of the anticlockwise spirals another.

You could also try to find out:

- how 'up' and 'down' are problematic in space;
- which direction water swirls out of a sink or bathtub;
- how Venus is different;
- which direction the planets orbit the Sun in.
